COMCAST NOW NATION'S LARGEST PROVIDER OF GIGABIT INTERNET

58 Million Homes and Businesses Have Access To Gigabit Internet Service; Represents Fastest Deployment to the Most Locations in the Country

PHILADELPHIA – October 18, 2018 – Comcast announced that it is the nation's largest provider of gigabit broadband, with the ultra-fast [Xfinity Gigabit Internet](#) and [Comcast Business Gigabit](#) services now available to nearly all of the company's 58 million homes and businesses passed in 39 states and the District of Columbia. This deployment represents the fastest roll out of gigabit speeds to the most homes in the country. Comcast has increased speeds 17 times in 17 years and has doubled the capacity of its broadband network every 18-24 months.

"Comcast continues to offer an unmatched Internet experience that combines gigabit speeds with wall-to-wall WiFi, personalized tools and controls, and enough capacity to stay ahead of tomorrow's innovations," said Dana Strong, President of Consumer Services, Comcast. "We've built an innovative high speed data platform that combines speed, coverage and control features and really sets our broadband experience apart from the competition."

Comcast's residential broadband service is powered and controlled by [Xfinity xFi](#), a digital dashboard that personalizes, monitors and manages WiFi connected devices in the home. Consumers now can add [xFi Pods](#), small, easy to install extenders that plug into any electrical outlet, pairs with xFi Wireless Gateways, and help customers create a mesh network that extends coverage to hard-to-reach areas of their home. Additionally, [Comcast Business](#) provides multi-gig speeds to business customers in Comcast's footprint – whether an enterprise with locations across the country that needs multi-gigabit speed or a small business with only a handful of locations.

Outside the home, Xfinity Internet customers also have access to more than 19 million WiFi hotspots, so they can stay connected on the go at no additional cost.

Comcast's residential Xfinity Gigabit Internet service uses the existing network connections that are already in most customers' homes. Installation is easy and requires no special construction or digging up lawns. In many cases, customers don't need a service visit, as the broadband equipment comes with a simple self-installation kit.

Gigabit service is among a wide range of speed offerings designed to support the personal needs of customers. Today, 75 percent of Xfinity Internet customers choose plans with speeds of 100 Mbps or more, double the speed those customers took just three years ago.

About Comcast

Comcast Corporation (Nasdaq: CMCSA) is a global media and technology company with two primary businesses, Comcast Cable and NBCUniversal. Comcast Cable is one of the nation's largest video, high-speed internet, and phone providers to residential customers under the XFINITY brand, and also provides these services to businesses. It also provides wireless and security and automation services to residential customers under the XFINITY brand. NBCUniversal operates news, entertainment and sports cable networks, the NBC and Telemundo broadcast networks, television production operations, television station groups, Universal Pictures and Universal Parks and Resorts.
